# Josephine Butler Unit HMP Downview

Summary of Questionnaires and Interviews  
21 December 2009

# Josephine Butler Unit

## Survey methodology

A voluntary, confidential and anonymous survey of a representative proportion of the population of children and young people (15–18 years) was carried out by HM Inspectorate of Prisons as part of an annual report on the young people's estate.

## Choosing the sample size

At the time of the survey on 21 December 2009, the population of young people in the Josephine Butler Unit was 11. Questionnaires were offered to all 11 young people.

Completion of the questionnaire was voluntary. Refusals were noted and no attempts were made to replace them.

Interviews were carried out with any respondents with literacy difficulties. No one was interviewed during this visit.

## Methodology

Every attempt was made to distribute the questionnaires to each respondent on an individual basis. This gave researchers an opportunity to explain the independence of the Inspectorate and the purpose of the questionnaire, as well as to answer questions.

All completed questionnaires were confidential – only members of the Inspectorate saw them. In order to ensure confidentiality, respondents were asked to do one of the following:

- have their questionnaire ready to hand back to a member of the research team at a specified time
- seal the questionnaire in the envelope provided and hand it to a member of staff, if they were agreeable, or
- seal the questionnaire in the envelope provided and leave it in their room for collection.

Respondents were not asked to put their names on their questionnaire, although their responses could be identified back to them in line with child protection requirements.

## Response rates

In total, all 11 respondents completed and returned their questionnaires. This represented 100% of children and young people in the establishment at the time. The response rate from the sample was 100%.

## Comparisons

The following document details the results from the survey. All missing responses are excluded from the analysis. All data from each establishment has been weighted, in order to mimic a consistent percentage sampled in each establishment.

Presented alongside the results from this survey are the comparator figures for all children and young people surveyed in young offender institutions. This comparator is based on all responses from surveys carried out in all four girls units since 2008.

Also included are statistically significant differences between the responses of young people surveyed at the unit in 2008 and the responses of this 2009 survey. It should be noted that, in order for statistical comparisons to be made between the most recent survey data and that of the previous survey, both sets of data have been coded in the same way. This may result in percentages from previous surveys looking higher or lower as some of our survey questions have changed. However, both percentages are true of the populations they were taken from, and the statistical significance is correct.

In all the above documents, statistically significant differences are highlighted. Statistical significance merely indicates whether there is a real difference between the figures; that is the difference is not due to chance alone. Results that are significantly better are indicated by green shading, results that are significantly worse are indicated by blue shading, and where there is no significant difference there is no shading. Orange shading has been used to show a significant difference in demographic background details.

## Summary

In addition, a summary of the survey results has been included, which shows a breakdown of responses for each question. Percentages have been rounded and therefore may not add up to 100%.

No questions have been filtered within the summary so all percentages refer to responses from the entire sample. The percentages to certain responses within the summary, for example 'not sentenced' options across questions, may differ slightly. This is due to different response rates across questions, meaning that the percentages have been calculated out of different totals (all missing data is excluded). The actual numbers will match up as the data is cleaned to be consistent.

Percentages shown in the summary may differ by 1 or 2 % from that shown in the comparison data as the comparator data has been weighted for comparison purposes.

# Survey responses from children and young people: Josephine Butler Unit (HMP Downview) 2009

**Survey responses** (missing data has been excluded for each question). Please note: where there are apparently large differences, which are not indicated as statistically significant, this is likely to be due to chance. NB: This document shows a comparison between the responses from all young people surveyed in this establishment with all young people surveyed for the comparator.

<b>Key to tables</b>		Josephine Butler Unit	Young people's comparator	Josephine Butler Unit 2009	Josephine Butler Unit 2008
	Any percentage highlighted in green is significantly better than the comparator.				
	Any percentage highlighted in blue is significantly worse than the comparator.				
	Any percentage highlighted in orange shows a significant difference in demographic details.				
	Percentages which are not highlighted show there is no significant difference.
