1. Introduction

Her Majesty's Inspectorate of Constabulary (HMIC) is an independent inspectorate with a statutory responsibility to "inspect, and report to the Home Secretary on the efficiency and effectiveness of every police force maintained for a police area" in England and Wales¹.

This report sets out findings from our review of the way police forces in England and Wales collect, record, evaluate and share information.²

Why information management is important

Information³ is the lifeblood of the police service. It leads to effective investigations, timely arrests and appropriate criminal justice outcomes. It also helps to prevent further crimes being committed. Information is vital in the fight against crime.

Seemingly one-off instances of suspicious or criminal behaviour assume a greater importance if it can be shown, by linking information, that they are not isolated, but form a pattern of behaviour that gives rise to concern. The whole picture may well be greater than the sum of its parts. This is why linking information and building the picture of the crime are so important – and why the consequences of failing to make the right links can have a significant adverse impact on the public; for example, the mistakes that were made during the police handling of allegations against Jimmy Savile. This is discussed in more detail below.

The recent decision of the Supreme Court in *R (Catt) v Association of Chief Police Officers* [2015]⁴ emphasises the pivotal importance of complying with the Code of Practice on the Management of Police Information 2005, the associated Authorised Professional Practice (APP) on information management⁵ and the former editions of

¹ Section 54(2) of the Police Act 1996.

² The intelligence management section of Authorised Professional Practice defines intelligence as "collected information that has been delivered for action" (www.app.college.police.uk). Thus, in policing terms, not all information is classified as intelligence, but all intelligence is a form of information. In this report, the term information includes both information and intelligence unless otherwise stated.

³ In this report, 'information' is used to refer to both information and intelligence. See page 20.

⁴ *R (Catt) v Association of Chief Police Officers of England, Wales and Northern Ireland and another (Equality and Human Rights Commission and others intervening)* [2015] UKSC 9.

⁵ *Authorised Professional Practice on information management*, College of Policing, 2013. Available from www.app.college.police.uk/app-content/information-management/management-of-police-information/. This is the body of guidance published by the College of Policing to provide the police service in England and Wales with policy and procedures to follow.

the national guidance.⁶ In her judgment, Baroness Hale echoes one of the main themes of this report in stating: “We do not need any reminding, since the murder of two little girls by a school caretaker in Soham and the recommendations of the report of the Bichard Inquiry which followed (2004) (HC 653), of the crucial role which piecing together different items of police intelligence can play in preventing as well as detecting crime.”⁷

Background: Mistakes Were Made

On 12 March 2013, HMIC published the findings of a review into how the Metropolitan Police Service, Surrey Police and Sussex Police dealt with the information and allegations which they received between 1964 and 2008 regarding the criminal sexual conduct of the late Jimmy Savile.⁸

This review considered the way in which these forces applied the Code of Practice on the Management of Police Information 2005, the APP on information management⁹ and the former editions of the national guidance¹⁰ in dealing with the information and allegations. It also examined the extent to which those forces made effective use of the Police National Database¹¹ to aggregate discrete pieces of information (from within and across forces) and so build a picture of the extent and nature of the alleged offending.

⁶ Code of Practice on the Management of Police Information issued under sections 39 and 39A, Police Act 1996 and sections 28, 28A, 73 and 73A of the Police Act 1997. Available from <http://library.college.police.uk/docs/homeoffice/codeofpracticefinal12073.pdf>

⁹ *Authorised Professional Practice on information management*, College of Policing, 2013. Available from www.app.college.police.uk/app-content/information-management/management-of-police-information/ This is the body of guidance published by the College of Policing to provide the police service in England and Wales with policy and procedures to follow.

¹⁰ *Guidance on the Management of Police Information*, 1st edition, Central Police Training and Development Authority, 2006, produced by the National Centre for Policing Excellence, and the second edition of the same, produced by the National Policing Improvement Agency in 2010. It is referred to in this report as ‘national guidance’.

¹¹ The Police National Database is a national information management system that improves the ability of the police service to manage and share information, to prevent and detect crime and make communities safer. It offers a capability for the police service to share, access and search local information electronically, overcoming artificial geographical and jurisdictional boundaries.

HMIC concluded that mistakes had been made in the handling of information and allegations and stated that we were “sufficiently concerned about information management” to conduct a further review in this area. This inspection fulfils this commitment and answers the question: could the same mistakes be made again?

Methodology

Our principal inspection objectives were to establish:

- if force strategies, policies and procedures for information management adhere to the principles of the APP on information management and former editions of the national guidance, are proportionate to risk and fit for purpose;
- if information and intelligence are captured, recorded, evaluated, acted upon, audited and retained by the police (including safeguarding interventions) in an effective way; and
- if the use of the Police National Database is effective and efficient.
- To answer these questions, HMIC analysed the results of a self-assessment survey¹² of information management practices which was completed by all 43 forces in England and Wales in 2013 (to give an indication of the national picture), and conducted three days of fieldwork in each of 13 forces.

National inspection findings

Given that chief constables are obliged to have regard to the Code of Practice on the Management of Police Information 2005, we expected that either:

- they would ensure that their forces complied with the Code, and with the relevant section of the APP on information management or former editions of the national guidance;¹³ or
- if, because of their local context and operating environment, they decided not to comply with elements of the APP on information management or former editions of the national guidance, that proper records would be maintained about the extent of and rationale for any move away from the Code.

¹² This survey was commissioned by the ACPO Information Management Business Area Lead, and conducted on his behalf by the College of Policing. We are grateful for permission to use the results.

¹³ *Authorised Professional Practice on information management*, College of Policing, 2013. Available from www.app.college.police.uk/app-content/information-management/management-of-police-information/. This is the body of guidance published by the College of Policing to provide the police service in England and Wales with policy and procedures to follow.

We were therefore disappointed to find that the reasons for decisions to depart from the APP on information management or former editions of the national guidance were only recorded in three of the 13 forces we inspected.

We also expected each force to have in place a current information management strategy – a requirement stipulated in the Code of Practice on the Management of Police Information 2005. Again, we were disappointed to find that this was not always the case.

In the light of case law and high-profile cases such as Jimmy Savile's long period of sex offending, we are materially concerned about the extent to which the police service is responding fully to the responsibilities inherent in a changing environment, where speedy access to up-to-date and relevant information is essential. For example, we found cases where forces had not revisited their position since the whole of the police service completed local information management implementation plans in 2010. In this regard, the absence of appropriate audit and assurance regimes (to check that information is being appropriately assessed, retained or disposed of) is especially worrying, and needs to be addressed swiftly.

HMIC found that forces which maintained a central information management team were better able to adopt the principles of the APP on information management and former editions of the national guidance. This was especially so when those teams had access to an integrated computer system that was able to reference and facilitate the assessment of all the information held on a named individual without the need to search separate computer systems.

It is a matter of serious concern that there is insufficient review taking place of the information that forces hold. Without these reviews – and the means to demonstrate that they have taken place properly or at all – the police service leaves itself vulnerable to challenge. The absence of sound and consistent reviews means that information might be destroyed when it should be kept, thus increasing the risk to public safety.

The volume of information acquired by the police means that not every piece of information can be evaluated and processed at the same time. The question then arises of how to identify those pieces of information which demand more immediate consideration than others. Clearly, the information which informs the police of a greater or more immediate risk to the public should be considered as soon as possible. We found that the extent to which information was reviewed, prioritised and indexed – and the capacity to undertake this exercise – varied between and within forces.

A significant strand of our inspection examined how sensitive information¹⁴ is handled, particularly when it is acquired and held as a result of specialist policing activities such as major crime investigations, counter-terrorism investigations and internal investigations of police officers and staff for misconduct, or corruption or other criminal offences. We found that there is scope for better integration between the IT systems which house sensitive information and the mainstream databases available to the police (such as the Home Office Large Major Enquiry System¹⁵). There is also scope for more effective processes to transfer information between systems; while our inspection found some awareness of the problems caused by the lack of such processes (for instance, some forces are developing the means to identify, isolate and transfer appropriate records on a case-by-case basis), there is more to be done.

Where information is marked as sensitive, the police must undertake reviews from time to time to determine whether such a classification remains appropriate. The importance of information fluctuates with the passing of time, and the police service should do more to act on those fluctuations. We found evidence that different practices are being followed in the 43 police forces in England and Wales with regard to the handling of sensitive information.

We were also concerned to note that only four of the forces we visited had a force-wide policy setting out how sensitive information should be treated; and even in those four forces, we did not find any evidence to show that compliance with the policy was being monitored to ensure that it was being followed. The absence of consistent practice together with differences of approach in implementation results compromises the ability to manage information effectively.

As a result of these findings, we have made ten recommendations (for the Home Office; the national lead for information management business area; chief constables and the College of Policing). These are set out on page 12.

Inspection findings in West Yorkshire

In the rest of this report, we describe our findings for the West Yorkshire Police inspection which we undertook between the 11 and 13 August 2014. These should be read alongside the thematic report, *Building the Picture: an inspection of police information management*, which is available from www.justiceinspectorates.gov.uk/hmic/wp-content/uploads/building-the-picture.pdf

¹⁴ 'Sensitive information' is that which is contained in specialist business areas, and generally hosted and used outside mainstream policing intelligence systems and processes. It is therefore only available to specialist officers. Examples include information on current operations; major crime investigations or counter-terrorism information; and information held by professional standards directorates.

¹⁵ An ICT system used for major crime investigations.

2. Findings for West Yorkshire Police

General

The deputy chief constable has senior responsibility for information management across the organisation, including how the force aligns to the Management of Police Information Code of Practice and associated national guidance.

Information management previously fell under the responsibility of corporate services and professional standards but is now a department in its own right and overseen by a detective chief superintendent.

Information and information communications technology (ICT) management are overseen by a number of high-level boards. These include the programme of change board (which has oversight of a series of major force development programmes), the IT prioritisation board (which oversees the introduction of information management projects) and the information assurance board (which has a role in ICT prioritisation and development). All boards are chaired by the deputy chief constable; this ensures consistency across a large number of work streams.

The force risk register set out the most significant risks to the force and these were reviewed at a quarterly meetings chaired by the deputy chief constable. A number of information management risks were listed on the register which means they were considered at senior management level. Further information management risks were managed through the departmental risk register.

Collection and recording

When an intelligence record is created by an officer, they add a handling code¹⁶. The originating officer is also responsible for making an initial assessment of its priority and recording this on Niche, the force's records management system.

Intelligence evaluators within the central intelligence unit conducted reviews on all intelligence submissions recorded onto Niche. The reviews included checking data standards and the handling code as well as an assessment of any decision on whether an incident should be recorded as a crime.

¹⁶ The Handling Code was introduced under the National Intelligence Model (see: introduction to intelligence-led policing, produced on behalf of the Association of Chief Police Officers by the National Centre for Policing Excellence, 2007). It evaluates the source, the validity of the data and the handling sensitivity of a piece of information. Each category has five possible gradings and hence the system is universally known within the police service as 5x5x5.

Reviews were prioritised according to the risk level allocated by the officer; intelligence records were assessed as high, medium or low. There was an expectation that all intelligence records graded as high would be reviewed within one hour, a requirement which was being delivered. Records graded as medium or low should be reviewed within 24 hours, a requirement which was also achieved under normal circumstances.

Each intelligence report created on Niche has a drop-down menu where the officer completing it can select a title. Senior evaluators conducted hourly checks using key word searches so that records of firearms, terrorism or threats to life were appropriately prioritised. Sexual offences and child or vulnerable safeguarding issues were not currently included in these key word searches.

Evaluation

Police information within the five core business areas¹⁷ is held on Niche which had been in place since 2006/7. Niche brings together records from across the force and ensures they can be searched using a single enquiry. Some records had not been converted to Niche and remain on systems which are no longer in use. However historical records that relate to people could be retrieved through a search engine known as CORVUS.

There had been a concerted effort to reduce duplicate records that relate to people who have come to police notice. This had reduced 80,000 records that were duplicated down to 23,000. Similar work had been undertaken for addresses.

Managing police information – common process

An information management strategy is in place. The strategy was high level in content but refers to the need to satisfy information management principles. The strategy did not fully detail the force position on meeting the Code of Practice and guidance. Nor did it detail how the force dealt with the requirement to review, retain and delete information. A separate records management policy was in place for paper records.

¹⁷ Child abuse, domestic violence, custody, crime and intelligence are known as the five core business areas for uploading onto the Police National Database (PND).

Sharing police information

As Home Office Large Major Enquiry System (HOLMES) does not have a direct link to Niche, the force depends on operational staff to enter intelligence from major enquiries onto Niche.

Officers were required to endorse each HOLMES log stating whether relevant intelligence has been submitted to Niche. The individual Niche reference should be added to cross-reference this process.

The level of Niche submissions was checked regularly by supervisory staff but there were no specific audits or dip-sampling.

Some local analysis of HOLMES information submitted to Niche indicated that only 50-60 percent of relevant intelligence was transferred (see national recommendation 3).

A project is in place to transfer information automatically from HOLMES to Niche. When implemented, the transfer will allow a significant quantity of intelligence, previously held only on HOLMES, to be available through a Niche search. However the timing for this to happen is unclear.

The current National Special Branch Intelligence System is being replaced as part of a national programme known as Apollo. Migration to the new system is governed by data rules about existing force information. The replacement programme has driven the review of special branch¹⁸ information and the deletion of records where appropriate.

Niche provides a series of access control levels which allow certain information to be restricted to certain job roles within the force where necessary. Where access control restrictions are in place, they should be reviewed every 90 days by professional standards department managers to make sure they are still valid. This review process has only been recently introduced and an assessment of it has yet to take place.

All restricted information on Niche is available through a CORVUS search. While the content of the intelligence may not be available, there will always be a search result returned so the officers know a record exists.

Information from the five core business areas is automatically uploaded to the Police National Database (PND) twice daily.

¹⁸ Special branch is a police unit that deals with terrorism and domestic extremism threats; usually works closely with a counter-terrorism unit

Retention, review and disposal

The information management unit was reviewing paper records held across the force. A team of ten staff managed by a sergeant had recently begun the reviews under the supervision of the force records manager. A risk management process had been designed for retention and deletion decisions. The review had been prioritised because of pressure on storage from the need to sell force buildings. A number of chief inspectors had been identified across the force to co-ordinate local progress and to assist the records review team.

Some police information on force systems is retained indefinitely. There is process of review on a 'come to notice' basis, although it is not clear in the policy whether this relates to both electronic and paper based records. There is no consistent process for deleting information once it stops being useful. This situation increases risk of duplication and compromises investigation and analysis (see national recommendations 1 and 7).

Any intelligence record which has been restricted will be marked for review after 12 months. These records will retain the original handling code unless there is a reason to review the record and adjust its original classification sooner. Intelligence records of this type are currently not included in the PND upload. This had been recognised and was due to be remedied but the timescales for completion are unclear (see national recommendation 6).

3. Thematic report – National recommendations

To the Home Office and the National Lead for Information Management Business Area

Recommendation 2

By May 2016, the Home Office and National Police Chiefs' Council's Information Management Business Area lead, should agree and implement common standards to be used by forces to identify and transfer information, no longer sensitive to an enquiry contained within HOLMES, to systems which are accessible and searchable by the police service generally.

To chief constables

Recommendation 1

By 30 November 2015, chief constables should ensure that a review is undertaken of the way in which their forces' information management policies and practice comply with the APP on information management so that they give effect to the national approach and minimise any divergence from that APP.

Recommendation 3

By 30 November 2015, chief constables should carry out systematic audits in their forces to identify the extent to which locally-adopted practices and procedures conform to the APP on information management.

Recommendation 4

By November 2015, chief constables should ensure that adequate local information management processes are in place to consider all available information in an efficient and systematic way so that the continuing levels of risk that individuals pose to communities are properly assessed and, where necessary, information is recategorised and linked.

Recommendation 5

By November 2015, chief constables should ensure that their local information management processes adequately identify and prioritise the records of those who pose the greatest risk, in order that they are properly monitored, and appropriate, timely action is taken.

Recommendation 6

By 30 November 2015, chief constables should put in place arrangements to scrutinise audits of compliance with the APP on information management through the force information management governance structure. This should include measures to ensure that categorisation of records are regularly adjusted.

Recommendation 8

Immediately, chief constables should make sure that their force information records are reviewed at the end of the review period set for each information grouping, and records created when decisions are made to retain information beyond the applicable period of retention.

To the College of Policing

Recommendation 7

By 30 November 2015, the College of Policing should amend its APP on information management so as to specify the minimum information management requirements for initial reviews in relation to the retention and disposal of information.

Recommendation 9

By 30 November 2015, the College of Policing should ensure that specific guidance about the handling and availability of sensitive information is included in the APP on information management, and by 30 June 2016, chief constables should ensure that the guidance set out concerning sensitive information, is implemented.

Recommendation 10

By 30 November 2015, the College of Policing should revise the current APP on information management and include a common review process in respect of sensitive information for adoption by all forces. This should include timescales for the review of sensitive information in order to ensure it remains appropriately categorised.

Recommendation 6

By 30 November 2015, chief constables should ensure that their local information management processes have a mechanism to identify and prioritise the records of those who pose the greatest risk in order that they may be appropriately monitored.

Recommendation 8

Chief constables should immediately ensure that their force records are reviewed at the end of the period associated with the information grouping, and, in the absence of the National Risk Assessment Criteria being applied, that a record should be created setting the justification for retaining it.

To the College of Policing

Recommendation 9

By 30 November 2015, the College of Policing should ensure that specific guidance about the handling, review and availability of sensitive information should be included in the relevant section of the Authorised Professional Practice.

Recommendation 10

By 30 November 2015, the College of Policing should revise the current information management section of the Authorised Professional Practice and prescribe a common review process in respect of sensitive information or adoption by all forces. This should include timescales for the review of sensitive information in order to ensure it remains appropriately classified.

Recommendation 7

By 30 November 2015, the College of Policing should set out in the information management section of the Authorised Professional Practice the minimum requirements in respect of what should take place on initial review.
