Comparison of survey responses between sub-populations of prisoners

In this table the following analyses are presented:
 - responses of prisoners in self-identified racial minority groups are compared with those of white prisoners.

Shading is used to indicate statistical significance (less than 1% probability that the difference is due to chance), as follows:

	Green shading shows results that are significantly more positive than the comparator
	Blue shading shows results that are significantly more negative than the comparator
	Orange shading shows significant differences in demographics and background information
	No shading means that differences are not significant and may have occurred by chance
	Grey shading indicates that we have no valid data for this question
